How to Use the Catalog

The Book Catalog of the U. S. Environmental Protection Agency Library System has been published in two volumes. Volume I is the full catalog, listing alphabetically by title the complete entry for each book owned by any of the EPA libraries. The title is printed in bold face type. Directly underneath, left justified, appears the call number (according to the Library of Congress Classification Scheme). At the far right of the same line is the publisher. The next line, in italics, reflects the author(s) and may be followed by an entry showing symposium data, subtitle, series, or other notes (not applicable to each title). The subject headings assigned to the book appear next, indented, one per line. The next line, indented still further, lists the code number for the holding library, pertinent volumes and/or editions, the date(s) of publication and, where appropriate, a call number used by the holding library which differs from the Library of Congress classification.

Volume II of the Book Catalog consists of Part 1, the Author Index, and Part 2, the Subject Index. The Author Index lists each author in alphabetical order. Indented beneath each name, alphabetically, appear the titles of the works of each author, followed by the call number for each title, in italics.

The Subject Index (Volume II, Part 2) lists, in alphabetical order, the subject headings assigned to the books in the catalog. Indented beneath each subject, alphabetically, appear the titles associated with it, followed by the call number, in italics, for each title.

The complete entry for items listed in the Author or Subject Indexes may be obtained by consulting the full catalog, where the appropriate title will be listed alphabetically. The holding libraries may be identified by referring to the List of EPA Libraries.

Each library has an additional part of the Book Catalog, published separately, which lists its own holdings in call number order (per the Library of Congress Classification Scheme). This list is used for inventory purposes and may be consulted as necessary by any user.
